

Dear Customer:

The following items listed below need to be measured in order to manufacture a replacement netting package. Start by numbering each perimeter pole on the diagram page. Please note that the number of perimeter poles may vary from cage to cage. I have enclosed a blank diagram for your cage.

1. Measurements of a divider net: _____
2. Width and height of back stop net: _____
3. Width and height of machine protector net: _____
4. Back width of hitters stalls: (on measurement sheet)
5. Height of outfield perimeter skirt: _____
6. Height of perimeter over hitters stalls: _____
7. Each outside perimeter post to center pole: (on measurement sheet)
8. Center of each perimeter post to center of perimeter post: (on measurement sheet)
9. Center _____ pole _____ height: _____

(To take a center pole measurement; have the collar cranked all the way to the top of the pole, place a piece of tape on the collar release rope at the finished concrete level, lower the collar and measure from the tape to the top of the collar.)

If you have any questions feel free to contact a sales representative from our office. We look forward to hearing from you.

Sincerely,

Jason Koch
